

Emblem Sewing Station

A Single Needle Lockstitch with thread trimmers and electric foot lifter has been configured specially to speed emblem sewing. The sewing machine mechanism has been adapted to permit free-hand sewing of emblems with monofilament and standard threads. Free hands' sewing eliminates the time-consuming and productivity-sapping turning of shirts to sew each side of the emblem and in most cases it remains on the hanger, eliminating the need of removal and re-hanging of the garment. To attain a quality, accurate sew and speed training, a laser light indicator and special foot ease sewing on the Merrow border to prevent later curling. The Machine has been turned sideways and elevated to give greater visibility of the sewing area and to ease handling, further enhancing productivity. Trained team members/operators can often match and exceed semi-automated equipment while providing flexibility on emblem shapes.

Any brand/model single needle equipped with thread trimmer can be adapted.
