

## **Manual Measure/Mark/Cut Station**

Cutting of trousers, pants, sleeve shirts and jeans is easily done with Americas 21<sup>st</sup> manual cutting station (Semi-automated also available), easily measure, and mark and cut inseam lengths. In operation the team member sets the required inseam length measure, loads the garment, and pulls the knife across, the clamp hold the garment and prevents

access to the blade for safety. An industrial-grade rotary knife then activates and smoothly cuts

through both legs – even through multi-layer jeans' felled seams. The table includes a crank mechanism to adjust table height for comfort and safety, four lockable casters, and a fluorescent work light, making this a complete stand alone work station. The process speeds the cutting of

garments to accurate leg lengths with a clean finished edge for separate hemming. Hooks on the table front ease hanging of finished garments, or an optional shelf can be added for work on folded units.

The product can be used alone or with Americas 21<sup>st</sup>'s other production stations for hemming and pressing of trousers, pants, and jeans, sewing of emblems, attachment of ID tapes, and so forth.
